

Electronics Watch

Développer durablement le devoir de diligence en matière de droits humains dans la gestion des fournisseurs

Conférence sur l'achat public durable Mise en œuvre de la loi sur la protection du climat - qu'est-ce que cela implique pour les marchés publics?

Bienne, le 12 mars 2024

Peter Pawlicki, directeur de la sensibilisation et de l'éducation

SOLUTION

Ce qui fait la spécificité d'Electronics Watch

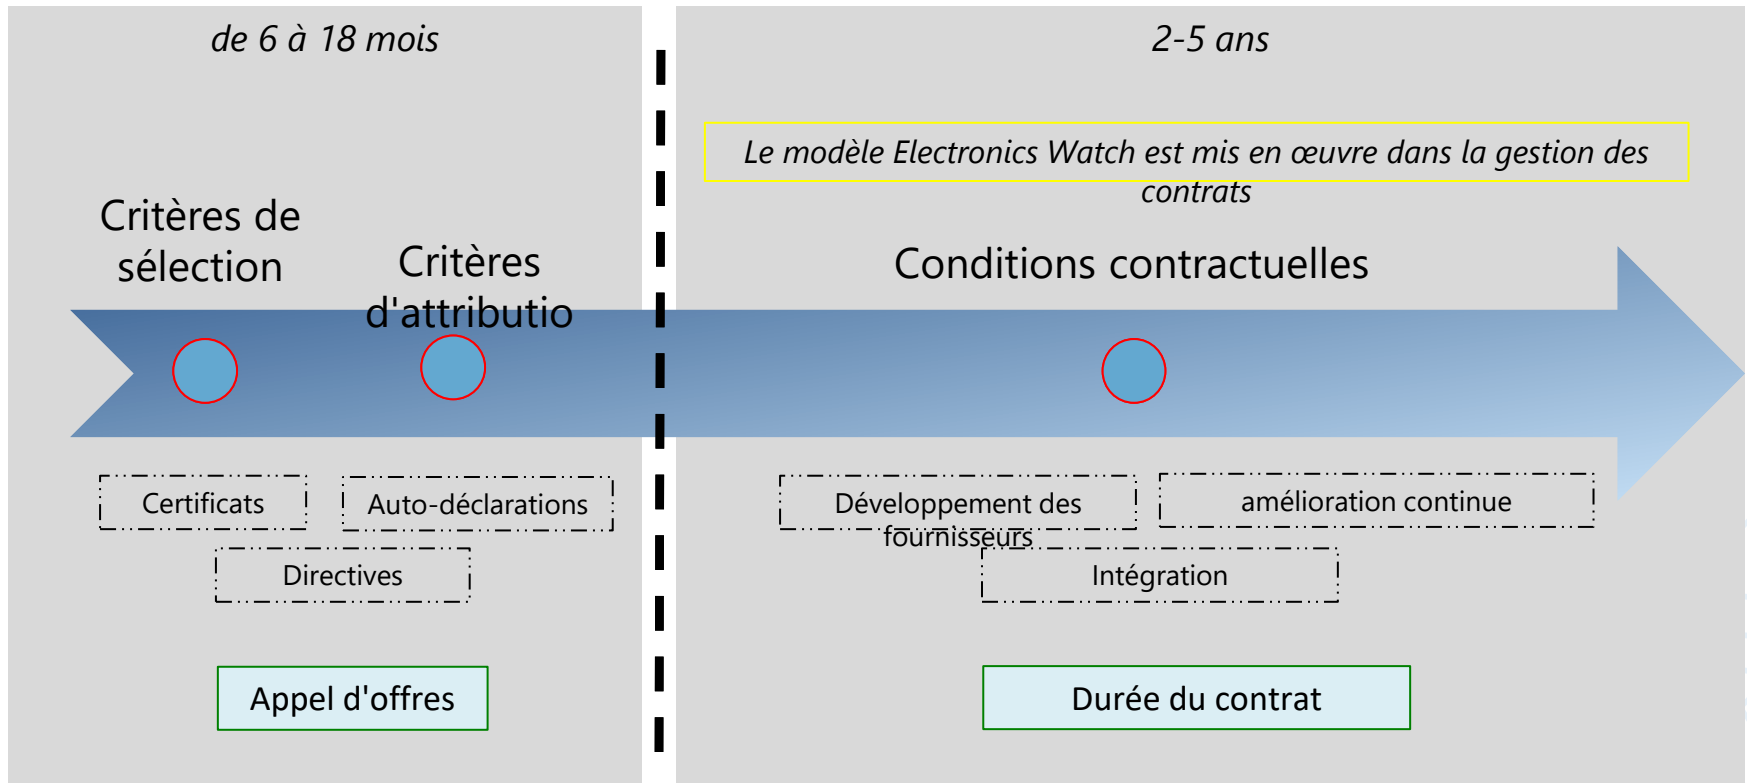

Electronics Watch aide les acheteurs publics à protéger les droits des travailleurs* dans leurs chaînes d'approvisionnement électronique. Nous coordonnons des mesures de surveillance et de réparation indépendantes.

→ Une coopération étroite entre les services d'achat augmente leur force d'exécution et simplifie l'interface pour l'industrie

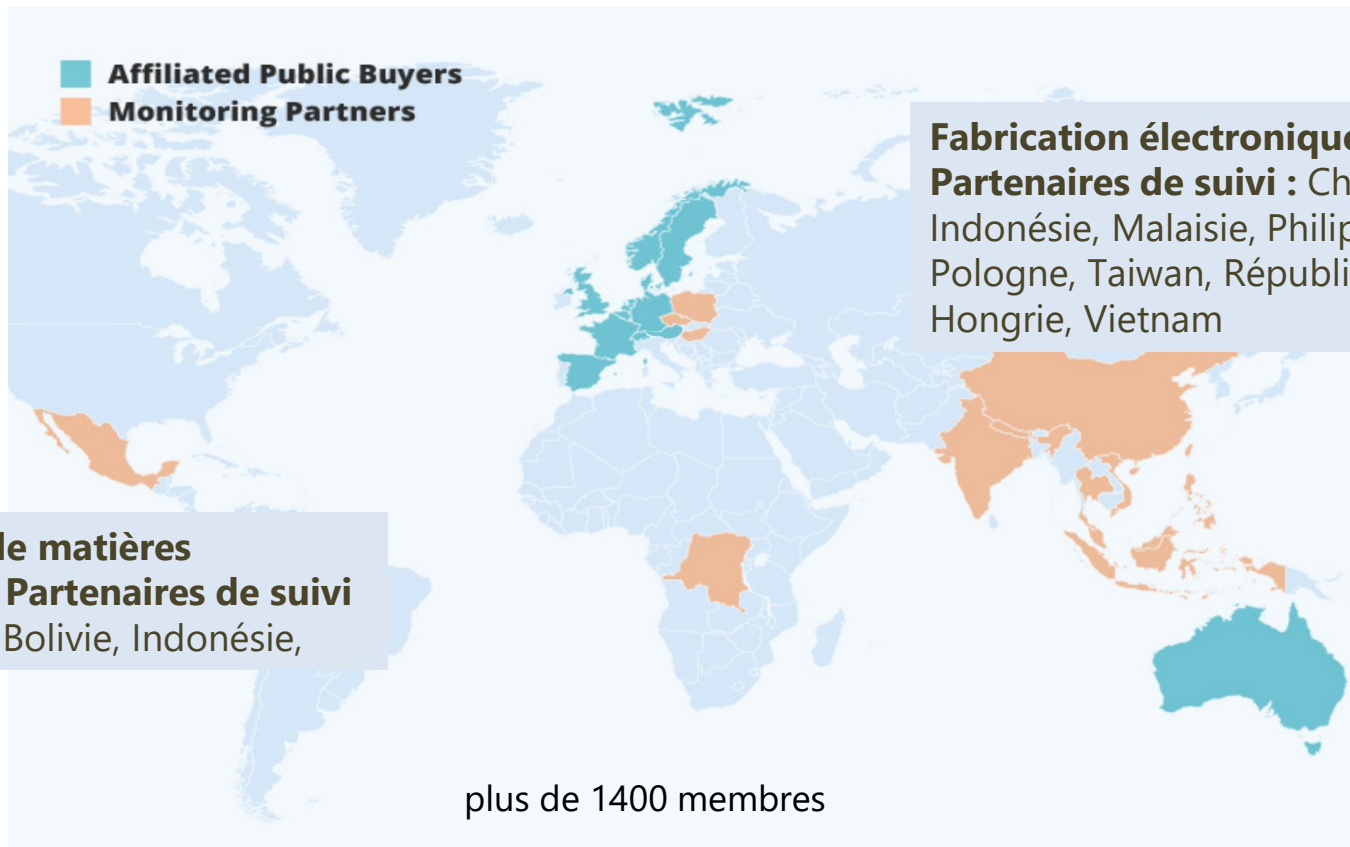

SOLUTION

Un impact durable grâce à une perspective à long terme

Les réseaux Electronics Watch

NORMES DE BONNES PRATIQUES

2021 Étude du service des achats du BMI

- Utilisation de l'audit social dans le contexte de l'achat public
- Electronics Watch est mis en avant de manière positive dans le rapport :
 - "un système bien développé pour enregistrer et traiter les plaintes".
 - "**Approches des meilleures pratiques** d'audit, comme celles de la FWF ou d'Electronics Watch" (FWF - Fair Wear Foundation)
 - "Certains standards - par exemple Electronics Watch ou la Fair Wear Foundation - utilisent de manière très conséquente l'intégration de ressources locales (entre autres des représentants des travailleurs ou des auditeurs)".
 - "Pour le secteur des TIC, il est recommandé d'examiner si une autorité publique pourrait devenir membre de l'initiative de normalisation Electronics Watch (EW) et si les conditions cadres nécessaires à cet effet existent".

COOPÉRATION AVEC L'INDUSTRIE

Responsible Business Alliance - RBA

Phase 1: Resulting in Version 1 Factory Report	Timeline ¹	
1. Electronics Watch releases Version 1 of factory report to RBA.	0	
2. RBA, in partnership with members, reviews the list of factory buyers. RBA notifies Electronics Watch if any buyers listed in the report are inaccurate and if there are additional factory buyers that are RBA members and not listed in the report.	10	8. RBA replies to each issue listed in the Version 1 report's Table of Issues and Recommendations. The reply includes RBA's initial findings in detail including the nature and level of the evidence for the findings. Not all investigations will result in an audit; however, with permission of the auditee, RBA will share the actual audit report. ³ Electronics Watch shares RBA's initial findings (not the audit report) with affected affiliates.
3. RBA consults with member companies and notifies Electronics Watch that it will follow up on the issues listed in the Table of Issues and Recommendations in the Version 1 report that RBA and RBA members agree are in scope. The factory to be investigated shall not have a voice in the decision on which issues to investigate. While the presumption is that RBA will address all In-Scope issues, RBA can exclude issues and explain why they are out of scope. This may include times when the RBA member chooses not to engage. In this case, RBA would still investigate the issue as part of membership compliance but would not have permission to discuss with Electronics Watch. The goal is that the parties will strive to reach consensus on issues to investigate within the timeline allotted for this step.	20	9. RBA provides the closure findings or its assessment of the status of findings in detail including the nature and level of the evidence. ² Not all investigations will result in an audit; however, with permission of the auditee, RBA will also share the actual closure audit report. ⁵
4. Electronics Watch makes any necessary corrections to the buyer list in the report and adjustments to the Table of Issues and Recommendations, reflecting issues that RBA has agreed to address, and sends a revised report to RBA.	5	10. Electronics Watch provides a statement of evaluation of the process to RBA. RBA shares this evaluation with affected member companies.
5. A) RBA shares the report with all RBA affected members, and the factory in the report, then notifies Electronics Watch that it has done so. B) In parallel, Electronics Watch notifies affected affiliates that there is a report on a factory in their supply chain and that the process of engagement with RBA and companies has begun. The notice names the factory, the affected RBA members, and summarizes key issues. It also identifies issues RBA has determined to be outside the scope of investigation if applicable, including the reasons provided by RBA for excluding those issues.	10	11. RBA notifies Electronics Watch and convenes a final alignment meeting to discuss non-confidential issues relating to the process of the case and to identify lessons learned. The factory, affected RBA members, and affected Electronics Watch affiliates will be invited to the meeting.
Phase 2: Resulting in Version 2 Factory Report		12. Electronics Watch prepares Version 2 of the report and shares with RBA.
6. RBA investigates as soon as possible, which may include reviewing a recent existing investigation or audit, or scheduling a new investigation or audit, and notifies Electronics Watch of when it will take place and the type of steps planned (such as VAP/SVAP/CMA/investigation ²), including methods to be used to gather data. If issues arise that result in a delay in the process the RBA notifies Electronics Watch and explains the issues. In all cases the objective is to move to corrective action as soon as possible.	45	13. RBA, in partnership with affected members, reviews Version 2 to ensure changes made are accurate and there are no factual mistakes. RBA may also suggest changes to the presentation of the report (not the content) in the interest of promoting constructive engagement between the parties and affected companies.
7. When initial investigation is complete RBA notifies Electronics Watch and identifies the audit firm.	30	14. Electronics Watch releases Version 2, with corrections if necessary, to affiliates. 15. In the spirit of this partnership, the RBA is given the opportunity to have a statement included, in its entirety, in the Version 2 report. A comment by Electronics Watch on the RBA statement is allowed.
		Phase 3: Resulting in Version 3 Factory Report
		16. In the event that a Version 3 public report is created, it will be shared with the other party. ⁵
		17. The party that did not draft Version 3 reviews the report and notifies the other party of factual errors and desired changes. In the spirit of this partnership, the other party is given the opportunity to have an unedited statement included in the Version 3 report. A comment on the statement is allowed.
		18. The party that drafted Version 3 corrects factual errors, makes a best faith effort to address additional suggested changes, and sends the final Version 3 report to the other party.
		19. Either or both parties release Version 3 to the public, with the other party's statement, after two-day wait period.
